

MEMORANDUM

May 13, 2026

To: All Auronex Members
Subject: Network Planning Memo

Thank you for your continued support of Auronex. As we continue scaling the platform, we appreciate your patience and cooperation.

We have observed that some users unintentionally register under an incorrect sponsor hierarchy. Because Auronex operates fully on-chain, correcting hierarchy errors after registration is **costly** and operationally complex. By design, blockchain records are **immutable** and intended to remain permanent. Any contract-level amendment requires additional transactions and significant on-chain cost.

Auronex registration is completed **on-chain**. The referral flow works as follows:

- Each referral link contains a shortened reference mapped to a sponsor wallet.
- When you **open a referral link**, the associated sponsor wallet is retrieved and stored in your browser **localStorage**.
- During registration, the *Auronex app* reads this `localStorage` value and assigns that wallet as your sponsor.
- If multiple referral links are opened, the *Auronex app* **retains only the first sponsor value** and ignores subsequent values.
- The retained wallet is then used as the sponsor for your registration.

You may ask why the *Auronex app* does not use the latest referral value. To uphold fairness, the platform honors the first referral link received by the user. However, subsequent user actions are outside the platform's control.

As an Auronex member, please follow these steps before staking:

1. **Complete registration under the correct sponsor** before making any staking commitment.
2. If the sponsor address is incorrect, **clear your browser cache/localStorage**, then reopen the intended referral link.
3. Verify that the intended sponsor is **displayed** before submitting your registration.
4. Proceed only after confirming that all displayed registration details are accurate.
5. **Ensure registration is fully completed** before initiating any staking commitment.

Auronex DAO
hello@auronex.app

This guidance is provided to help prevent unintended sponsor-hierarchy outcomes. Please note that future hierarchy-change requests will not be accommodated, as blockchain registration records are **immutable** and cannot be altered except through exceptional on-chain intervention.

Thank you for your understanding and cooperation. If you require further clarification or assistance regarding registration or sponsor verification, please contact your sponsor directly as your first point of support. If the issue remains unresolved, you may request your sponsor to escalate the matter through the appropriate Auronex support channel.
